

B N SRIKRISHNA COMMITTEE-DATA PROTECTION

GS 2, MAINS: Government policies and interventions for development in various sectors and issues arising out of their design and implementation.

- The report has huge implications on data handling and processing practices by both Indian as well as foreign companies along with government departments.
- This is a landmark report in many ways, given its multiple but critical touchpoints: a nascent but growing digital economy, the unmapped and uneasy relation between citizens (the committee calls them “data principals”) and data managers (“data fiduciaries”), the state’s contentious role, the legal dilemma of trying to constrain globally mobile data within local legislative jurisdictions, among many others.

RECOMMENDATIONS OF THE REPORT:

- The committee recommends that processing (collection, recording, analysis, disclosure, etc) of personal data should be done only for “clear, specific and lawful” purposes. Only that data which is necessary for such processing is to be collected from anyone.

- Your personal data may be processed by the government if it is considered necessary for any function of Parliament or State Legislature. This includes provision of services, issuing of licenses, etc.

- The committee recommends giving “data principals” (persons whose personal data is being processed) the ‘right to be forgotten’. This

means they will be able to restrict or prevent any display of their personal data once

PUTTING USERS FIRST

A Data Protection Authority of India must be set up with the chief justice or a Supreme Court judge as its head. This body will protect “data principals” and enforce the data protection law

Those processing data must acquire informed consent, spell out the purpose of collection and retain personal data only as long as necessary

Users will have right to be forgotten, to know about how their personal data is processed, to make corrections or updates, and to receive details of their data

Storage of all critical personal data — a classification that government will determine — should be within the country. All other personal data must be stored as a copy in India

Punishment for violating the law can range from ₹5 crore or 2% of total worldwide turnover to ₹15 crore or 4% of the total worldwide turnover of the companies. For individuals, it can range from up to a 3-year or 5-year jail term, depending upon the sensitivity of the data

Exemptions:
Privacy law will not apply in cases involving national security, police investigations and legal proceedings

“Data privacy is a burning issue and there are three parts to the triangle: Citizens’ rights have to be protected, the responsibilities of the states have to be defined, but data protection can’t be at the cost of trade and industry”
Justice BN Srikrishna

the purpose of disclosing the data has ended, or when the data principal withdraws consent from disclosure of their personal data.

- Personal data will need to be stored on servers located within India, and transfers outside the country will need to be subject to safeguards. Critical personal data, however, will only be processed in India.

MINT QUICK READS

PRIVACY LAW IN THE MAKING

- ▶ Data Protection Authority of India (DPA), an independent regulatory body responsible for the **enforcement and effective implementation** of the law, will be established
- ▶ An appellate tribunal to be established or grant powers to an **existing appellate tribunal** to hear and dispose of any appeal against an order of the DPA
- ▶ The panel has identified **50 statutes and regulations**, which have potential overlap with the data protection framework
- ▶ The Aadhaar Act needs to be amended to **bolster data protection**, and the committee has suggested some amendments
- ▶ The law will cover processing of personal data by both **public and private entities**

The data protection law will be like a new shoe, tight in the beginning but comfortable eventually.

Justice B.N. Srikrishna

- The Committee recommends that “sensitive” personal data (such as passwords, financial data, sexual orientation, biometric data, religion or caste) should not be processed unless someone gives explicit consent – which factors in the purpose of processing.

- The Committee has recommended setting up a Data Protection Authority which is supposed to “protect the interests of

data principals”, prevent misuse of personal data and ensure compliance with the safeguards and obligations under the data protection framework by corporations, governments or anyone else processing personal data (known as “data fiduciaries”). The obligations on data fiduciaries include conducting audits and ensuring they have a data protection officer and grievance redressal mechanism – the Authority will need to publish Codes of Practice on all these points. The Authority shall have the power to inquire into any violations of the data protection regime, and can take action against any data fiduciaries responsible for the same.

- The Committee has suggested recommendations to the Aadhaar Act 2016 to ensure autonomy of the UIDAI and “bolster data protection”. These include offline verification of Aadhaar numbers and new civil and criminal penalties – though the ability to file complaints will remain with the UIDAI alone.

MERITS:

- Changes To The Language Of Privacy: Europe's recently implemented General Data Protection Regulation refers to individuals whose data is collected as 'data subjects' and those who collect the data as 'data controllers'. Justice Srikrishna's committee has changed this language to 'data principals' and 'data fiduciaries,' saying an individual is the focal factor in the digital economy.
- Approach on Surveillance: The committee has recognised that though security of the state is a ground for partial exemption from the data protection law, it must come with certain safeguards to prevent abuse.
- Data Portability Framework: The committee has proposed several rights for data principals, namely right to confirmation, access, correction, data portability, right to be forgotten etc. Data portability across silos is the strongest representation of the rights of users and it will be incredibly powerful. To address concerns of costs, the committee has proposed that fiduciaries may be allowed to charge a reasonable fee to effectuate this right.

DRAWBACKS OF THE RECOMMENDATIONS:

- Report and Bill-Conflicts: There are several proposals that the committee has dealt with in the report, but they've not made their way into the Personal Data Protection Bill also proposed by them. For instance, while they have talked about surveillance reforms in the report, the Bill doesn't have any provisions on it.
- The report has proposed several amendments to the Aadhaar Act but they aren't included in the Bill.
- Data Localisation-Huge Cost, Unclear Purpose: The committee has proposed strict standards for cross-border transfer of data and storage. A lot of start-ups just use cloud platforms. They don't care whether it's an Indian or international cloud. Cloud storage is the cheapest because it can be stored anywhere. The start-ups are now forced to choose more expensive options. The big corporations who want access to the market may be able to do this, but smaller businesses will find this very cumbersome. Further, setting up and running data centres has a huge environment cost attached to it.
- The proposal is to have one national authority and there's no concept of regional authorities. A national level authority won't be able to cope with the volume of complaints that'll come to it.
